Software engineer

Lead Senior Software Engineer with 14+ years of experience, specializing in frontend architecture and scalable cloud solutions. Adept in Angular and accessibility-first UI design, alongside Azure Solutions and DevOps CI/CD. Known for cross-functional leadership, mentoring, and driving user-centered design in cloud-native environments.

WORK EXPERIENCE

Applied Information Sciences (AIS)

03/2016 – Present

Lead Senior Software Engineer • Full-time

Led multiple teams in UI/UX development and grew to lead pre-sales teams in creating architectural designs centered around AI/ML.

- Led architectural decision-making, including technical solutions selection and framework implementation for an Azure AI Search application with over 4 million records.
- Optimized deployment pipelines, achieving a 100% reduction in deployment failures caused by integration issues with automated testing and continuous integration practices.
- Mentored junior developers on best practices for code quality and agile processes, fostering a culture of continuous improvement and collaboration across the team.
- Developed and implemented a design system and Angular/TypeScript common component library that improved UI consistency across applications.
- Led \$360k pre-sales cloud solution design, architecting an ETL workflow to streamline geospatial data to production and set the foundation for future AI/ML projects within 4 months.
- Spearheaded the integration of AI into a Django Wagtail CMS with VueJS, enhancing resource classification and metadata generation, improving search efficiency and reducing time spent importing resources.
- Brought in new technologies while leading development of a low-code claims intake solution using agent-based orchestration and AI-assisted workflows; delivered modular components for data capture, extraction, and classification, integrated with Azure services to streamline insurance operations
- Led the integration of CI/CD practices that streamlined end to end deployment processes, enhancing security through regular security scans and unit testing, resulting in a more resilient application and faster deployments.

Riverside Research

09/2013 – 03/2016

Senior Software Engineer

- Developed interactive, data-driven web pages using jQuery, Python, and Perl, enhancing the user interface with modern UI tools and protocols.
- Enhanced web applications by updating to HTTPS protocols and implementing jQuery plugins to improve data presentation and user interactivity.

SAIC

09/2010 – 09/2013

Software Engineer

- Developed the Geospatial Open Source Toolkit (GOST) for the Air Force Research Laboratory (AFRL), which facilitated multilingual web searches, text capture and translation, and geospatial data analysis.
- Created SOAP and REST APIs in Python for data integration, using HTML, CSS, JavaScript, and AJAX for dynamic web-based user interfaces.

Wright State University

04/2009 – 10/2010

Operating Systems Course TA

Programming Assistant Level I
Reynolds & Reynolds
Web Developer Intern

07/2009 – 08/2009

EDUCATION

Bachelor of Science in Computer Science
Wright State University

CERTIFICATIONS

ES2015: The Shape of JavaScript to Come
Real-Time Web with Node.js
Shaping up with Angular.js

VOLUNTEERING & LEADERSHIP

Girl Develop It
Chapter Leader

08/2015 – 12/2018
Dayton, Ohio

Organized and taught workshops and courses in programming basics and introductory computer science.

PUBLICATIONS

Web-based Geospatial Information Extraction (IEEE 2012 NAECON)
Language Translation of Web-based Content (IEEE 2012 NAECON)

SKILLS

Adobe XD, Angular, Architecture, Automated Testing, AWS, Azure, Cobertura, Code Reviews, Community Engagement, CSS3, Data Integration, Debugging, Django, Docker, Efficiency, Frontend Development, Geospatial Data Analysis, Git, GitLab CI, Helm, HTML5, JavaScript, Java Spring Boot, Jenkins, Jenkins, jQuery, JUnit, LCOV, Leadership, Mentoring, Mentorship, Node.js, Oracle DB, PL/SQL, Python, REST APIs, Team Management, Terraform, TypeScript, UI/UX, Web Development, YAML pipelines
